

Definition:

Web Intelligence (WEBI) Reports – displays an error message in a pop-up display box that is not very descriptive in certain circumstances. These messages are not customizable, and so some of the known errors are listed in this document.

Example: Employee Verification Lookup report error with invalid prompt values:

1. The values for the last 4 digits of the SSN and LASTNAME are entered into the prompts. If the combination of the employee last name and the last 4 SSN are not found in the system, the following error message will display:

2. The values for the last 4 digits of SSN and the LASTNAME are entered into the prompts. If the employee last name is found in the system, but the last 4 digits of SSN do not match what was entered into the prompt, the following error message will display:
