Issue with Job Family and Job Branch Displaying Incorrectly

We have found an issue in reports where the job family and job branch data elements in all BI and BOBJ reports are not reflected correctly on historical reports. We are working to fix the issue and expect to have it in place soon. In the meantime, please note that any job branch or job families that are shown on historical reports may reflect their **current** relationship to their job instead of a historical one. We apologize for any inconvenience.
